

Master User Prompts (Raw Extraction)

This document contains only prompts authored by the user. Assistant responses, reasoning, code-generation logs, and implementation results have been excluded where identifiable. Prompts are preserved in chronological order within each conversation export.

Source: Pasted code.txt

Prompt 1

InspironicsExecutionDisciplineEngine.pdf
Inspironics_Enforcement_Engine_Pro.xlsx

I created a complete enterprise-grade PRD for your Execution Discipline Engine platform based on the uploaded framework and scoring model. It includes:

- Full product architecture
- Engineer leaderboard system
- Discipline scoring engine
- Leave governance engine
- Compensation linkage
- RBAC and security
- Dashboard analytics
- API requirements
- Database design
- Enterprise deployment strategy
- Claude execution instructions
- Implementation roadmap
- Scalability and governance standards

The PRD is structured so Claude can directly use it to start building the platform architecture and implementation. Based on the uploaded framework document

Show more

Prompt 2

Attached content

i need a calendar type if i click the date field it should open the calendar.

Prompt 3

I want you to perform a complete production-grade audit and correction of this Discipline Flow system.

Context: This application was originally built based on the attached PDF and spreadsheet logic. Until now, some areas used mock/demo/static data. From this point onward, the system must behave as a real-time operational execution discipline engine with production-quality logic.

Your task is NOT just UI improvement. Your task is to validate and enforce the actual business rules, workflows, calculations, governance logic, and real-time behavior exactly as defined in the PDF and spreadsheet.

Critical Instruction: Remove all mock data, fake analytics, placeholder charts, hardcoded records, demo metrics, and simulated scores from the entire application.

Everything must now work using:

real database-driven data

real-time calculations

persistent storage

actual workflow logic

actual enforcement rules

dynamic dashboards

Now perform a complete system audit and verify whether the application truly follows the PDF and spreadsheet requirements.

Audit and validate ALL of the following:

DAILY OUTPUT VISIBILITY ENGINE

Assigned vs Delivered logic

Daily measurable outputs

RAG scoring system

Automatic GREEN/AMBER/RED calculation

Daily logs persistence

Engineer performance visibility

Founder/lead visibility

Historical tracking

LEAVE GOVERNANCE ENGINE

No extension rule enforcement

Weekly leave cap enforcement

Pattern abuse detection

Native-town leave pattern tracking

Automatic escalation logic

Stage-based eligibility

Role/tenure/performance restrictions

Leave approval workflows

Rule violation detection

DISCIPLINE SCORE ENGINE Validate score calculations exactly:

GREEN day = +2

AMBER day = +1

RED day = -2

Extension = -3

Pattern abuse = -5

Verify:

real-time score updates

monthly reset

cumulative scoring

transparent score history

audit-safe calculations

no manual manipulation loopholes

COMPENSATION LINKAGE Verify:

score band mapping

warning thresholds

pay impact calculations

role review triggers

escalation workflows

reward logic

compensation visibility

DASHBOARD & ANALYTICS Remove all fake charts and dummy metrics. Ensure:

charts use real DB data

live updates work

productivity trends are real
leave vs output correlation is calculated dynamically
founder command dashboard is operational
filters/search/sorting work correctly
analytics are historically accurate
ROLE BASED ACCESS CONTROL Verify:
employee access isolation
lead/admin permissions
founder visibility
protected routes
unauthorized access prevention
proper RBAC implementation
DATABASE VALIDATION Check:
schema correctness
relation integrity
indexing
normalization
duplicate prevention
historical logs
audit trails
scalability readiness
WORKFLOW VALIDATION Test end-to-end:
create task
assign task
update delivery
calculate RAG
apply discipline score
create leave request
enforce rules
trigger violations
update dashboards automatically
AUTOMATION VALIDATION Ensure:
real-time updates
background calculations
scheduled resets
escalation triggers
notifications
score recalculations
dashboard sync
UI/UX VALIDATION Ensure:
all pages are functional
no broken states
no empty mock cards
no placeholder values
responsive layout
enterprise-grade consistency
investor-grade presentation quality
SECURITY & DATA INTEGRITY Check:
data tampering prevention
score manipulation prevention
route protection
form validation
secure database operations
input sanitization
audit logs
FINAL REQUIREMENT I will now start using this system daily with real entries and real tracking.

So before production usage:

identify every broken flow
identify every missing implementation
identify every fake/static module
identify every incorrect calculation
identify every inconsistent workflow
identify every incomplete feature
Then FIX them completely.

Do not leave any placeholder implementation. Do not use static demo data anymore. Do not keep partial workflows.

Convert this from a prototype/demo app into a fully operational real-time execution discipline platform exactly aligned with the PDF and spreadsheet business rules.

Show more

Prompt 4

Approved: deleting DailyTracker, deleting LeaveRequest, deleting WeeklyScore.

Prompt 5

Attached content
replace these fields in the upload image with below fields

Intern Probation Associate

Show more

Prompt 6

can you tell me the entire flow and step about this website what can he do ? what is the step by step procedure imagine if i entry the thorfinn tell me the entire steps and each and every page

Prompt 7

Attached content
can you tel for what reason if i click crodd symbol it cant close.

Prompt 8

Attached content
still i cant able to close

Prompt 9

Attached content
for what reason the single score is used it just display the scores computed as in the image . for what reason we have compute this week ? it just disply the pop up how can vcky name present in multiple time

Show more

Prompt 10

Attached content

if i click compute this week why vicky and vishnu display two times

Prompt 11

Attached content

you didn't fix the bug as you said still now if i click compute this week again vishnu and vicky names display mutiple times

Prompt 12

Approved: deleting WeeklyScore.

Prompt 13

Approved: deleting WeeklyScore.

Prompt 14

tell me the tech stack you used for this website

Prompt 15

for backend

Prompt 16

Additionally, align the system completely with the original "Execution Discipline Engine" vision from the PDF and spreadsheet.

The current implementation should NOT behave like only a leave approval system or HR portal.

It must function as a real:

Execution Governance Platform
Productivity Accountability Engine
Discipline Intelligence System
Founder Command Center

CRITICAL MISSING MODULES TO IMPLEMENT

DAILY OUTPUT ACCOUNTABILITY FLOW

Employees should NOT depend entirely on managers for daily tracking.

Implement proper employee-driven accountability flow.

EMPLOYEE DAILY FLOW:

Employee logs in daily

Employee submits daily work update

Employee enters:

Assigned task
Expected output
Actual output
Completion percentage
Proof links (GitHub PR, commits, Figma, docs, screenshots, etc.)
Blockers/issues
Entry gets submitted for manager review

MANAGER FLOW:

Manager reviews employee daily entries

Manager validates output

Manager assigns/finalizes RAG status:

GREEN

AMBER

RED

Manager can override score with reason logging

Every override must be audit logged

SUPER_ADMIN FLOW:

Admin can monitor all employee submissions

Admin can monitor all manager validations

Admin can view discipline trends organization-wide

TASK ASSIGNMENT SYSTEM

Implement proper "Assigned vs Delivered" workflow exactly as described in PDF.

Managers should be able to:

create tasks
assign tasks to employees
define expected outputs
define deadlines
define priority
define measurable completion criteria
Employees should:

view assigned tasks
update progress
mark completion
attach proofs
System should:

compare assigned vs delivered
calculate completion quality
feed results into RAG scoring
Without task assignment tracking, RAG scoring becomes subjective. So this module is mandatory.

AUTOMATED DISCIPLINE ENGINE

Implement real automated discipline logic.

System should automatically:

calculate daily scores
calculate weekly scores
calculate monthly cumulative scores
detect RED streaks
detect recurring leave abuse
detect low productivity patterns
trigger warning states
trigger escalation states
generate discipline alerts
NO MANUAL SCORE CALCULATIONS.

AUTOMATED RAG CALCULATION LOGIC
RAG should not remain only manual.

System should evaluate:

task completion %
expected vs delivered output
missed deadlines
proof validation
productivity quality
Then recommend:

GREEN
AMBER
RED
Manager can validate/finalize.

FOUNDER COMMAND CENTER
Implement true leadership visibility dashboard.

SUPER_ADMIN dashboard should include:

organization productivity trends
team-wise performance
top performers
at-risk employees
leave abuse trends
weekly discipline summaries
RAG distribution
task completion trends
manager-wise analytics
employee activity heatmaps
real-time org health
This dashboard is a core part of the PDF vision.

EMPLOYEE SELF-SERVICE PORTAL
Employees should have their own workspace:

My Tasks
My Daily Updates
My Leave Requests
My Score History
My Performance Trends
My Violations/Warnings

My Activity History

Employees should NOT only create leave requests. They should actively participate in execution tracking.

AUDIT & GOVERNANCE SYSTEM

Add complete audit infrastructure.

Track:

- who created tasks
- who modified scores
- who approved leave
- who overrode RAG
- who changed statuses
- timestamps for every action
- before/after values
- No silent modifications allowed.

PRODUCTIVITY INTELLIGENCE LAYER

Implement analytics beyond leave tracking.

System should analyze:

- employee consistency
- delivery reliability
- task completion velocity
- leave vs output correlation
- manager performance
- organizational discipline health

REAL ENTERPRISE WORKFLOW

Final operational workflow should be:

SUPER_ADMIN → organization governance → analytics visibility → manager oversight → final approvals

MANAGER → task assignment → employee supervision → leave approvals → RAG validation → performance monitoring

EMPLOYEE → daily updates → task execution → proof submission → leave requests → self accountability

FINAL SYSTEM GOAL

Do NOT build: ■ simple HR leave management system

Build: ■ real-time Execution Discipline Platform

The platform must enforce:

- accountability
- productivity visibility
- execution governance
- behavioral discipline
- leadership visibility
- operational consistency

Everything must align with:

uploaded PDF
uploaded spreadsheet
RAG scoring model
discipline governance model
assigned vs delivered philosophy
Convert the current workflow into a true enterprise-grade execution operating system.

Show more

Prompt 17

AUTHENTICATION UI IMPLEMENTATION IS STILL MISSING.

Now implement a complete enterprise-grade authentication system with visible frontend pages and route protection.

REQUIRED AUTH PAGES

Create the following pages immediately:

/login

/signup

/forgot-password

/reset-password

/unauthorized

LOGIN PAGE REQUIREMENTS

Create a modern enterprise login page.

Features:

Inspironics branding

Email field

Password field

Show/Hide password

Remember me

Forgot password link

Login button

Loading state

Error handling

Responsive UI

Dark enterprise theme matching the dashboard

Behavior:

User enters email + password

System authenticates using real backend validation

Redirect based on role: SUPER_ADMIN → admin dashboard MANAGER → manager dashboard

EMPLOYEE → employee portal

SIGNUP PAGE REQUIREMENTS

Create a full signup page for employees.

Fields:

Full Name

Email

Password

Confirm Password

Department
Role (default EMPLOYEE only)
Location
Phone Number (optional)
Validation:

email uniqueness
strong password rules
password confirmation
required field validation
Behavior:

New signup creates EMPLOYEE account only
Managers/Admins cannot self-register
Manager/Admin accounts only created by SUPER_ADMIN
DEFAULT AUTH FLOW
SUPER_ADMIN: ask@inspironics.net Password: Ask@211

MANAGER: vishnurd17@gmail.com Password: Vishnu_1709

These should be seeded automatically in database initialization.

FORGOT PASSWORD FLOW
Implement:

forgot password request
reset token generation
secure password reset
expiration handling
ROUTE PROTECTION
Unauthenticated users:

cannot access dashboard
cannot access protected pages
should automatically redirect to /login
Authenticated users:

should only access permitted routes based on RBAC
Unauthorized access:

show proper Unauthorized page
SESSION MANAGEMENT
Implement:

secure session handling
JWT or session auth
persistent login
logout
session expiration
automatic redirect on logout
NAVIGATION REQUIREMENTS
Before login:

only auth pages visible
After login:

show role-based sidebar/navigation

EMPLOYEE:

My Tasks

My Leaves

My Performance

MANAGER:

Dashboard

Team

Daily Tracker

Leave Approvals

Scores

SUPER_ADMIN:

Full platform access

FINAL REQUIREMENT

Authentication must be fully visible and operational.

Do NOT keep hidden/mock auth. Do NOT bypass login using local state. Do NOT expose protected pages publicly.

The platform should behave like a real enterprise SaaS application with proper signup/login experience and RBAC-secured access.

why this message display while login in the user account

Prompt 22

Attached content
in invite user display admin and user where is the manager role we already talked about it

Prompt 23

now i need to explain this to my Co-employess so explain every thing what we have what can it do ,
how it will do , etc.. dont miss anything

what is the step by step procedure to explain this discipline engine to a new person.

now cook it.

Show more

Prompt 24

Some errors were detected, base44 will try to fix them automatically.
see errors

Prompt 25

Refine the audit and override visibility architecture.

Current issue: When managers override RAG scores or make operational review decisions, the system exposes every override directly to admin-level visibility. This creates an overly strict surveillance feel and reduces managerial autonomy.

Update the system architecture as follows:

MANAGER OVERRIDE PRIVACY RULE
Managers should have operational authority to:

validate employee submissions
approve/reject leaves
confirm RAG status
override auto-RAG suggestions

These actions should NOT automatically appear as high-priority alerts or visible override events in the admin dashboard.

Admins should NOT see:

normal operational overrides
routine manager adjustments
standard RAG confirmations
ordinary leave approvals
day-to-day management corrections

Managers must be trusted to operate independently within their governance scope.

NEW AUDIT ARCHITECTURE

Split logging into 3 separate layers:

ACTIVITY LOG Purpose: Normal operational history

Examples:

employee submitted update
task progress updated
proof link uploaded
leave request created

Visibility:

employee
assigned manager

MANAGER OPERATIONS LOG Purpose: Routine managerial workflow tracking

Examples:

manager approved leave
manager rejected leave
manager finalized RAG
manager updated task status
manager added review notes

Visibility:

manager
optionally admin through deep audit tools only
NOT visible on normal admin dashboard
Important: These should NOT trigger admin alerts.

CRITICAL AUDIT LOG Purpose: High-risk governance monitoring only

ONLY log critical events such as:

manual score tampering
direct discipline score editing
deleting records
policy bypass
unauthorized access attempts
bulk modifications
role/permission changes
suspicious override patterns
repeated excessive overrides

Visibility:

SUPER_ADMIN only

These are the ONLY events that should surface in admin-level audit dashboards or escalation panels.

OVERRIDE LOGIC CHANGES

When manager overrides auto-RAG:

save override internally
save override reason
maintain historical traceability
DO NOT surface it as admin alert
Admin should only see override behavior IF:

override frequency becomes abnormal

suspicious pattern detected
repeated bias behavior detected
override abuse threshold exceeded
ESCALATION INTELLIGENCE
Create smart escalation logic.

Admin gets notified ONLY IF:

manager excessively overrides scores
manager repeatedly changes RED to GREEN
abnormal approval behavior detected
suspicious leave approvals occur
policy abuse threshold crossed
Normal operational management should remain autonomous.

FINAL GOAL

The platform should feel like: ■ enterprise governance

NOT: ■ surveillance micromanagement

Managers must have:

operational independence
trusted authority
review ownership
Admins should focus only on:

governance integrity
escalation handling
abnormal behavior detection
organizational oversight
Implement this architecture cleanly across:

audit system
dashboards
notifications
override workflows
admin visibility rules.

Show more

Prompt 26

Enhance the Leave Request system to support real-world enterprise leave workflows.

Current issue: The existing leave form only supports generic full-day or multi-day leave requests using From Date and To Date fields.

This creates ambiguity for:

half-day leave
permission leave
short-duration absence
first-half / second-half leave
Implement a proper leave duration architecture.

NEW FIELD: LEAVE DURATION TYPE

Add a new required dropdown field:

Label: Leave Duration Type

Options:

Full Day

Half Day - First Half

Half Day - Second Half

Multiple Days

Hourly Permission

Place this field between:

Leave Type and

Date fields

DYNAMIC FORM BEHAVIOR

The form should dynamically change based on selected Leave Duration Type.

CASE 1 — FULL DAY

Show:

Single Date field

Hide:

To Date

Time fields

Auto-calculate: Total Duration = 1 Day

CASE 2 — MULTIPLE DAYS

Show:

From Date

To Date

Auto-calculate:

total leave days

weekends/holidays if applicable

Display: "Total Duration: X Days"

CASE 3 — HALF DAY (FIRST HALF)

Show:

Single Date

Auto-set: Duration = 0.5 Day

Display: "Half Day Leave — First Half"

CASE 4 — HALF DAY (SECOND HALF)

Show:

Single Date

Auto-set: Duration = 0.5 Day

Display: "Half Day Leave — Second Half"

CASE 5 — HOURLY PERMISSION

Show:

Date

From Time

To Time

Auto-calculate: Total Permission Hours

Example: 2:00 PM → 4:00 PM = 2 Hours

DATABASE REQUIREMENTS

Update leave schema to include:

leaveDurationType

totalDuration

totalHours

halfType

fromTime

toTime

Ensure proper validation and persistence.

DISCIPLINE SCORING INTEGRATION

Leave penalties must now respect duration granularity.

Examples:

Full-day unplanned leave = full penalty

Half-day leave = partial penalty

Hourly permission = minimal or no penalty

Multi-day extension = escalated penalty

System should support accurate score calculations based on leave duration.

UI/UX REQUIREMENTS

Dynamic field rendering

Real-time duration preview

Validation messages

Smart placeholders

Responsive layout

Enterprise-grade UX consistency

Examples: "Total Duration: 0.5 Day" "Total Duration: 3 Days" "Permission Duration: 2 Hours"

POLICY INTELLIGENCE

Add smart warnings such as:

"Half-day leave exceeds weekly allowance"

"Consecutive leave pattern detected"

"Frequent hourly permissions detected"

FINAL GOAL

Convert the leave system from: ■ simple date-based leave form

into: ■ enterprise-grade time-off management workflow

supporting:

full-day leave

half-day leave

multi-day leave
hourly permission
accurate discipline scoring
real operational flexibility.

Show more

Prompt 27

did you update the system guide ? because we made a changes right if you not update the system guide please do it

Prompt 28

Attached content
what this for what is the use ?

Prompt 29

if manager overrides rag points it should not send alert to the admin

Prompt 30

Attached content
so the score deleted shows permentely or it disaaper after some days

Prompt 31

Or I can add a "Clear old logs" button in the UI that lets admins purge logs older than X days

implement this!!!

Prompt 32

Attached content
Attached content
i cant delete this logs due to below the 30days do you think this is neccesary i select thge 30 days and click delete logsstill these logs are not deleted

Prompt 33

Attached content
critical events
Manager operations
Activity Log
whats the use of these 3 explain shortly whart it can do

Show more

Prompt 34

The platform is now being used by real employees, managers, and admin users. Multiple critical production issues and permission failures have been identified.

This is no longer acceptable as a prototype/demo-level application.

Perform a full production hardening and permission enforcement audit across the entire system.

CRITICAL ISSUES TO FIX IMMEDIATELY

DOUBLE TIME / DUPLICATE DATE-TIME DISPLAY ISSUE

Problem: Leave requests and some records are displaying duplicated time/date values or inconsistent timestamps.

Fix all:

- duplicate time rendering
- timezone inconsistencies
- UTC/local conversion issues
- repeated date display bugs
- frontend/backend date mismatch

Standardize the entire platform to use:

- one consistent timezone strategy
- clean formatted display
- proper locale-safe rendering

Ensure:

- leave requests show correct dates
- half-day/hourly leaves render correctly
- timestamps are not duplicated
- createdAt/updatedAt are properly formatted

TASK EDIT PERMISSION FAILURE
CRITICAL SECURITY ISSUE.

Current problem: Tasks assigned to a specific user can still be edited by other users.

This is unacceptable.

Fix RBAC and ownership enforcement immediately.

TASK OWNERSHIP RULES

Assigned Employee:

- can update ONLY their own assigned task progress
- can submit proof links
- can update completion %
- cannot edit core task definition

Manager who created task:

- can edit task details
- can change deadlines
- can reassign tasks
- can mark final completion

Other Employees:

- must NOT edit
- must NOT modify
- must NOT delete
- must NOT access unauthorized task APIs

BACKEND ENFORCEMENT REQUIRED
Do NOT rely only on frontend hiding.

Implement proper backend validation:

- verify logged-in user identity
- verify task ownership
- verify creator role
- reject unauthorized API requests
- return proper 403 forbidden responses

FULL PERMISSION & SECURITY AUDIT
Audit the entire platform for similar weak permission issues.

Check ALL modules:

- tasks
- leave requests
- daily tracker
- scores
- comments
- approvals
- analytics
- audit logs
- team management

Ensure users cannot:

- edit others' data
- bypass UI restrictions
- manipulate scores
- access unauthorized routes
- modify records through API calls

STRICT RBAC ENFORCEMENT
SUPER_ADMIN:

full platform control
MANAGER:

- manage only assigned team members
- review employee tasks/leaves
- cannot modify admin-level settings

EMPLOYEE:

- access only personal workspace
- edit only own submissions
- view only authorized data

OBJECT OWNERSHIP VALIDATION
Every record in database must enforce ownership rules.

Examples:

- task.ownerId
- task.createdBy
- leave.employeeId
- tracker.employeeId
- score.employeeId

Before any update/delete:

validate role

validate ownership
validate permission scope
FRONTEND PROTECTION
Hide actions dynamically:

unauthorized edit buttons
unauthorized delete buttons
unauthorized admin menus
unauthorized manager controls
Prevent accidental UI exposure.

AUDIT ALL EXISTING BUGS
Perform a deep platform audit for:

duplicate rendering bugs
broken state handling
stale cache issues
cross-user data leakage
improper filtering
incorrect task visibility
invalid role access
race conditions
missing validations
API SECURITY HARDENING
Every protected API must:

validate JWT/session
validate role
validate ownership
validate organization scope
No direct client trust.

DATA INTEGRITY PROTECTION
Prevent:

duplicate records
unauthorized overwrites
inconsistent timestamps
invalid score calculations
invalid leave duration states
FINAL REQUIREMENT
This system is now live with real users.

The platform must behave like a real enterprise-grade SaaS application.

Fix all:

weak permissions
ownership leaks
timestamp bugs
unauthorized editing
cross-user modification vulnerabilities
RBAC inconsistencies
No demo-level behavior should remain anywhere in the platform.

Show more

Prompt 35

Implement strict hierarchical leave approval enforcement exactly as follows.

The leave approval system must follow role-based approval authority.

LEAVE APPROVAL HIERARCHY

EMPLOYEE LEAVE REQUESTS

If the leave request is created by a normal EMPLOYEE:

ONLY the assigned MANAGER can:

approve leave

reject leave

modify approval status

Admin should NOT directly interfere with normal employee leave approvals unless escalation is required.

Rules:

Employee creates leave request

Status defaults to "Pending"

Assigned Manager reviews request

Manager changes status: Pending → Approved Pending → Rejected

Employees themselves must NEVER:

approve their own leave

edit approval status

bypass workflow

MANAGER LEAVE REQUESTS

If the leave request is created by a MANAGER:

ONLY the SUPER_ADMIN can:

approve leave

reject leave

modify approval status

Other managers must NOT:

approve another manager's leave

reject another manager's leave

modify manager leave status

Rules:

Manager creates leave request

Status defaults to "Pending"

Request automatically routes to SUPER_ADMIN

SUPER_ADMIN changes status: Pending → Approved Pending → Rejected

SUPER_ADMIN LEAVE REQUESTS

If SUPER_ADMIN creates leave:

optional self-approval allowed OR

keep informational-only record

SUPER_ADMIN should never depend on managers for approval.

BACKEND VALIDATION (MANDATORY)

Do NOT rely only on frontend visibility.

Before changing approval status:

- validate logged-in user role
- validate request creator role
- validate approval authority
- reject unauthorized updates

Examples:

EMPLOYEE request:

- Manager allowed
- Other employees forbidden
- Other managers forbidden unless assigned
- Admin optional read-only visibility

MANAGER request:

- ONLY SUPER_ADMIN allowed
- Unauthorized attempts must return: 403 Forbidden

DATABASE REQUIREMENTS

Track:

- requestedBy
- requesterRole
- assignedManagerId
- approvedBy
- approverRole
- approvalTimestamp
- approvalComments

UI REQUIREMENTS

EMPLOYEE VIEW:

- can create leave request
- can view status
- cannot edit approval status

MANAGER VIEW:

- approval controls visible ONLY for employee leave requests
- cannot see approval buttons for manager requests

SUPER_ADMIN VIEW:

- can approve manager leave requests
- can monitor all leave requests

FINAL GOAL

The approval system must strictly enforce organizational hierarchy.

Correct flow:

EMPLOYEE → Manager approval

MANAGER → Admin approval

SUPER_ADMIN → self-governed/admin-controlled

No role should be able to bypass this hierarchy.

Show more

Prompt 36

since the last prompt was not applied can check it ? wheather the requirements is applied or not?

Prompt 37

but still the manager can edit their leave approval status

Prompt 38

Attached content
in new leave request form . remove the native travel and personal in Leave type instead add
Earned

Prompt 39

Attached content
in my stake page only shows his personal task assing to his gmail or outlook why others tasks are
displaying in my tasks . fix it and i need this application should be great look in mobile app ui so fix
this issues

Show more

Prompt 40

Attached content
For assign task procedure Who ever mentioned in assign To field they should receive the
notification through mail.

Prompt 41

Attached content
why my workspace pge dosent disply to manager rle?

Prompt 42

Attached content
Attached content
what is the diffrence between these two forms ?

Prompt 43

see this app is on production level . my company employess are using these website now make
sure dont make mistakes check all the flow is correct and make sure in the mobile phone ui this
website ui is not satisied please fix these kind of issues .

Show more

Prompt 44

Attached content

Attached content

in the previous prompt the mobile view ui was nice ok but in desktop view changes are not statisfied youcan view it the uploaded images please refine these changes

Prompt 45

Attached content

Attached content

Attached content

all the uplaoded page are k but inthe 3rd image i uploaded how to calculate score ? and whats the purpose of log entry . because we already have Log todays update in my workspace what is the need

Prompt 46

Attached content

See manager assign the task to employee name Sudalai Muthu A but sudalai did not receive the assign task . if a manager assign a task to an empoyee it should receive an employee through notification gmail and the assigned task should be display in the assigned employee my task page

Show more

Prompt 47

Attached content

im in the team page but i cant edit and add their email adress

Prompt 48

Attached content

Attached content

manager and admin assigned a task to an employee employess received the task through their gmail ok but the task canable ta see in the My tasks page the assigned employee supposed to see the assised task in my workspace -> My tasks !!!! fix this!!

Show more

Prompt 49

Attached content

see i need to correct their name so that you can match their user name and employee name

Prompt 50

Attached content

Attached content

while manager assign the task to an employee the description dooen not display in the assigned task to the employeye for the proof see the 2nd image i uploaded fix this issue

Prompt 51

Attached content

why everne name is changed some of our employee name end with dev ? what happend

Prompt 52

Attached content

some of the name is wrong i mean by spelling wise si if i edit the name it beacame a choas or not ?

Prompt 53

Attached content

i wnat a filter option in my workspace so that i can easily filter the name

Prompt 54

add one more rule !!!

if an employee does not update the todays log update the employees score point is reudce 1 point make sure the employee should receive the notification through their email timing(12:00 AM -11:59 PM) if the time cross you can automatically send notification to the employee mail that you have not update the log.

during holidays the employee dont have to update todays log update it is not neccessary because they are in leave right 3 if an employee takes a leave he should rasie a leave request before 1 week. if he doesnt raise a leave request before 1 week the employee mark 1 point will reduce if the leave is for emergency purpose he can take leave there is no need too reduce -1 point for that usecase .

iy you have any doubt regarding the mention rules you can ask me

Show more

Prompt 55

Rule 1 — Daily Log Reminder:

The notification goes at end of day if no update submitted. i want indian standard time (e.g., 9:00 PM IST) yes , you Should reduce the -1 score deduction also happen automatically at that time.

Rule 2 — Holidays:

see i mean i mention the leave as the request previously so the manager or admin approve the leave that i mention as holiday . and make sure on every month on 2nd saturday and 4th saturday and sunday's company will be holiday . so dont reduce the -1 score deduction on the company holiday . i want you to clarify me that if a company suddenly gives holiday to all employee during weekday what happend does everyone got -1 deduction?

Rule 3 — Leave Notice:

yes, "Before 1 week" = leave request must be submitted at least 7 days before the leave start date The -1 point reduction for late leave requests — it should be applied when employee raised leave request with in 1 week . the leave request should approved by admin or manager within 3 days. For emergency leave — yes, the "emergency" leave type already in the system. If yes, those are fully exempt from the -1 rule? -> Yes

Show more

Prompt 56

to all the employee and manager you should send the email notification on 6:00PM IST . that dont forgot to update the log today!!! Every day at 10:00 PM IST, check all active employees

Manager/admin should approve within 3 days — yes, send a reminder email to managers if a leave request is still pending after 3 days

othger all rules are ok you can proceed it

Show more

Prompt 57

10:00 PM IST → Check who still hasn't submitted → deduct -1 point + send penalty email if the employee got penalty email on the particular day he should not enter the log today's update on that day

Prompt 58

i have one doubt if i dont mention the github link in log todays update it will become a chaos ?

Prompt 59

Attached content

Attached content

see i changes the employee name in team page but the names doesnt reflect in the my workspace page??? fix it

Prompt 60

Attached content

stlll the name has not changed

Prompt 61

Attached content

the name changes are made on my workspace but remaing page still display wrong name

Prompt 62

Attached content

Attached content

Attached content

Attached content

analye the complete project still soma of the pages the employee name is not updated where evr employee name is present the spelling should be exactly in the team page so fix this issues!!!

Prompt 63

Attached content

i need a filter option that need to filter employee by his name not only in manager review where evr employee present we need to add filter option so that we can easily filter the employee by his name

Prompt 64

Attached content

vishnu is a manager how can he will validate his work i already told the flow that manger work is verify by admin and the employee work is review by manager this is the flow so fix this manager cant revie the another manager work. admin have the access to review manager and employee work

Show more

Prompt 65

Attached content

vishnu is the manager how can he validate the surya work . surya is also a manager how can manager evaluate anather manager work in the previous prompt i mention what is the flow to evaluvate please go through that

Show more

Prompt 66

still you havent change the process of review ???

Prompt 67

fix this

Prompt 68

Attached content

Attached content

Attached content

in yesterdays siddharth has been submitted his log todays update then why you send the email to him and -1 score deduction. what kind of issue the sceenshot proves his work sbmitted

Prompt 69

Attached content

see if any employee submitted todays log update . dont send a penaly mail see siddharth has been submitted his work but you send him a penalty mail he got -1 score deduction fix this issues . you dont have to verify the field that if one field is not filled so they got penaltly mail i dont wnat these please fix this issue

Show more

Prompt 70

siddharth got -1 score deuction did you fix this he sumbmitted his work so dont reduce his score -1

Prompt 71

Approved: updating WeeklyScore.

Prompt 72

is there any page that we can see who got penalty . if the penalty is wrong we can edit this ?

Prompt 73

Attached content

reverse the late leave penalty to the siva because we introduce the leave rule previous days only so hereafter you can strictly apply the leave rules

Prompt 74

Approved: updating WeeklyScore.

Prompt 75

Approved: deleting AuditLog.

Prompt 76

Attached content

what is the purpose of critical event what will do ?

Prompt 77

i need the option that admin can delete the critical events

Prompt 78

Attached content

siva has submitted his work then why did you send penalty mail to siva and -1 score deduction

Prompt 79

siva got -1 score deduction did you fix this he submitted his work so don't reduce his score -1

Prompt 80

Approved: updating WeeklyScore, updating DailyTracker.

Prompt 81

Attached content

why this warning and payimpact are displayed the 2 is mentioned for completed his work or what other purpose?

Prompt 82

Attached content

The "2" next to Siddharth = his weekly discipline score is +2 points (earned from completing daily tasks with Green RAG status).

then why warning label is showing under Siddharth name

Prompt 83

Attached content

how manager can validate his own work in manager review in previously i already told you about the manager review validation rules then why you didn't apply these rules

Prompt 84

Attached content
but still submit review button is enabled so i can review my own mark and mark my own score fix this issue

Prompt 85

Attached content
Attached content
vishnu task in manager review is not showing to vishnu it display No pending reviews — all caught up! . but in admin manger review can able to see my work

Prompt 86

Attached content
vigeshwar is a manager in his dashboard in manager review page vishnu work is displaying and the submit and review button is displaying so that vigneshwar can validate my work fix this issue no managers can validate the other manager work and no manager can validate his own work only admin role can validate manager work so disable the submit and review button so no manager can validate and edit other manager work

fix this issue this rules apply to leave request approval status also

Show more

Prompt 87

Attached content
you didnt aply the changes which i mention previously . still teh manager can have the access to edit other managers work in manager review still the submit review button is enabled.

Prompt 88

(e.g. "Vishnu" in Employee vs "Vishnu R D" in User

fix these kind of issue every employee , manager ,adiminhas same name that should reflect on db , everything so dont bring name as a constraint fix this issues every ones name is same as they mention in team page that name should reflect in db and other pages fix this issues

Show more

Prompt 89

Attached content
his name is surya but in link to app user it displays sramesh i dont want his name as sramesh it should be surya i need to edit these name

Prompt 90

Attached content
delete this mail form the db

Prompt 91

Change Some Functionalities : Admin Role Has full access and control over all modules. Can review and manage: Manager activities and performance. Intern activities and performance. Can view, edit, approve, reject, and audit all records. Has access to all leave ledgers across the organization. Manager Role

Managers:

Vishnu Vigneshwar Surya Siva

Permissions:

Can only review and manage Intern-related activities. Cannot review, modify, or approve records belonging to other Managers. Can access leave ledger information only for Interns under their supervision. Can approve/reject Intern leave requests according to organizational policies. Cannot access Admin-level controls or Manager leave records. Intern Role Can submit work updates, reports, and tasks for review. Can apply for leave and view personal leave ledger. Can only access their own records and data.

Show more

Prompt 92

Managers Can Review Leave Requests Only From Interns

Prompt 93

If a Work is Reviewed , Update in every other section where they need to be updated like in points , interns dashboard etc

Prompt 94

Need To Update: If Task is Reviewed Update the Scores in Leaderboard " The Leaderboard is a public-facing ranking visible to all employees. It shows who is performing best based on weekly discipline scores. It creates healthy competition and transparency — employees can see where they stand relative to their peers without seeing sensitive manager notes."

Show more

Prompt 95

So The managers can able to Review Other Probation Member's Leave and Works , also admin can review everyone

Prompt 96

The Managers are : Vigneshwar , Vishnu , Surya , Siva . they have the access to modify daily trackers , RAG Scores , Approve/Deny Leave requests. Managers can't Access Each other and Associates while Admin has access to review them. So managers can Review Others including those who are in Probation and Intern not Associates

Show more

Prompt 97

Admin can Access Anyone and Managers should not review eachother

Prompt 98

Update Review status after a review is done and update RAG Scores for everyone

Prompt 99

In My workspace --> My Leaves module add A dropdown for filterout name

Prompt 100

Make The Names Same as in All places without modifying anything in DB

Prompt 101

If a New person apply for a leave make the dropdown to update the names

Prompt 102

Check for any inconsistencies?

Prompt 103

The Manager's Should not Review Other Managers Logs and their Own logs only admin reviews them. whereas managers can review interns and probation employees log

Prompt 104

Even though Vishnu , Surya , Vigneshwar are in probation they shouldn't review logs of Other managers and themselves.

i.e. Vishnu shouldn't have access to review Surya or by Himself and vice versa for all managers.

but the current problem is due to logic of reviewing in probation employees these managers can review eachother and by themselves due to they are in probation period

Show more

Prompt 105

Its still not changed

Prompt 106

Change that Manager in Probation cannot Review logs of Other Manager in Probation or by Themselves. While they can review other normal probation and interns employees log.

the Managers in Probation are : Surya , Vishnu and Vigneshwar

Show more

Prompt 107

Siva Is a Manager in Associate so same logic applies for him

Prompt 108

While updating daily log or Task it asks proof , whereas currently it only accepts link or text , now add a feature to add screenshots , documents , links , text

Prompt 109

Still Managers Can Review Their Works and Other Managers Works. Resolve It.

If a Work is reviewed by any manager make sure to display Reviewed By who in everyones display.

Show more

Prompt 110

now show reviewed by who for previously done reviews

Prompt 111

Also show manager Name who reviewed the work

Prompt 112

Attached content

in daily tracker revert the score points for siva . make sure dont revert the siva's work . only revert the siva score point so that again the admin can review the siva's work

Prompt 113

I approved: updating DailyTracker, updating DailyTracker. I rejected: updating DailyTracker.

Prompt 114

Attached content

in daily tracker revert the score points for surya . make sure dont revert the surya work . only revert the surya score point so that again the admin can review the surya work.

Prompt 115

Approved: updating DailyTracker.

Prompt 116

Remove the reverse option for Managers - Self , they shouldn't reverse their Auto penalties Only admin can.

Prompt 117

1.In the dashboard it shows some statistics in that add click functionalities and expand it

2.While updating their works add a option to choose remote or onsite and also only persons who got approval from admin for remote will only be valid

Show more

Prompt 118

in the daily tracker revert changes made to Siva on Jun 6 including scores

Prompt 119

keep his records and log just change his review status and score it will only be updated by admin

Prompt 120

Approved: updating DailyTracker.

Prompt 121

Database Design (PostgreSQL) You need a centralized table to store the daily logs. The key is to use an Enum for both the work type and the approval status.
employee_id: Links to your user table.

work_type: ONSITE, REMOTE, or ONDUTY.

status: PENDING, APPROVED, or REJECTED.

date: The date of the log.

manager_id: The ID of the person responsible for approving.

validation_notes: Optional text field for managers to leave a reason for rejection or validation details.

Backend Logic (FastAPI / Server) Your backend acts as the gatekeeper. When an employee submits their log from the dashboard, the backend applies your business rules.
The Submission Endpoint (POST /attendance/log):

If the employee selects ONSITE, the system can automatically set the status to APPROVED (assuming they are physically there, perhaps validated by the office IP address or a biometric trigger).

If the employee selects REMOTE or ONDUTY, the backend strictly sets the status to PENDING and saves it to the database.

The Manager Endpoint (PATCH /attendance/{log_id}/approve):

This route should be protected by a simple, secure authorization method (avoiding complex tokens if unnecessary, relying on strict role-based access control).

It accepts a status update from the manager to change a PENDING record to APPROVED or REJECTED.

Frontend Dashboard Views (React / UI) You will need to build two distinct views based on the user's role.

For the Employee:

Action: A dropdown menu to select "Onsite", "Remote", or "On-Duty" for the day.

Feedback: A history table showing their recent logs. If they submitted "Remote", the status badge shows a yellow "Pending" until the manager reviews it. Once approved, it turns green.

For the Manager (Validation & Records):

Action: A dedicated "Approvals" tab. The dashboard fetches all records where status == 'PENDING'.

Validation: The manager sees a list of employees requesting remote or on-duty work. They can click a checkmark to approve or an 'X' to reject.

Audit Trail: Managers also have a "Records" view to see historical data for auditing purposes, ensuring that all remote days were formally validated.

The Complete Workflow Request: Employee logs into the dashboard and selects "Remote".
State Creation: Database creates a record with status: PENDING.

Notification (Optional): The system flags the manager's dashboard or sends an email.

Validation: The manager reviews the request. If the employee has a valid reason or remaining remote allowance, the manager clicks "Approve".

Record Finalized: Database updates to status: APPROVED. The employee's dashboard reflects the change, and the payroll/HR system now officially counts that day as worked.

Show more

Prompt 122

Add Another module Presence with these flow and update that status in logs and dailytracker and where ever it needs updation

Prompt 123

Approved: deleting Presence, deleting DailyTracker.

Prompt 124

Revert

FM

Only admin approves remote for Managers and Associate and not self approval by them .

Other employees can be approved by both Managers and Admin and not self approval

if anyone logs their work or tasks its important to update remote or onsite and Onduty with valid approvals

Show more

Prompt 125

Add a bulk approval feature in the Presence module so managers can review and approve multiple pending remote work requests at once.

Prompt 126

GPS Geofencing (Location Validation) If your dashboard is accessed via a mobile app (using something like React Native) or a modern web browser, you can enforce location checks. How it works: When the user clicks the "Onsite" button, the frontend requests their GPS coordinates.

The Logic: The app calculates the distance between the employee's location and the office coordinates. If the employee is outside a tight radius (e.g., 50 meters), the "Onsite" button is disabled or the request is blocked before it even hits your PostgreSQL database.

Show more

Prompt 127

I have accidentally Deleted Sudalai muthu from team kindly revert that.

revert Location presence.

if a manager is review a work add a feature to make query or contest the work

also add any other features which would enhance workflow

Show more

Prompt 128

Managers Should able to query the work while reviewing it

Prompt 129

Added New Record for Sudalaimuthu , Find existing works and scores gained , completed tasks and assign to this new data

Prompt 130

Approved.

Prompt 131

Approved: updating DailyTracker, updating WeeklyScore, updating Task, updating Presence.

Prompt 132

remove permission request for remote and change it to normal. people can change or log with remote or onsite as their wish

Prompt 133

Remove the presence module

Prompt 134

Discipline Engine Enhancement Requirements

Objective

Enhance the Discipline Engine employee management platform to support secure Remote Work Management, Attendance Tracking, Location Verification, and Login Audit functionality for both

onsite and remote employees.

Module 1: Remote Work Request Management

Feature Overview

Create a dedicated "Remote Work Request" page where employees can submit requests to work remotely.

Employee Features

Submit Remote Work Request.

Select:

Start Date

End Date

Reason for Remote Work

Project/Department

View Request Status:

Pending

Approved

Rejected

View Previous Remote Work History.

Admin Features

Review all submitted requests.

Approve or Reject requests.

Add remarks/comments while approving or rejecting.

View employee remote work history.

Generate reports for remote work requests.

Notifications

Notify employee when request status changes.

Send email/system notification for approval or rejection.

Module 2: Remote Login Authorization

Business Rule

Only employees with an Approved Remote Work Request should be allowed to login remotely.

Validation Logic

User attempts login.

System checks:

Is employee physically inside company premises?

Yes → Allow Onsite Login.

No → Check Remote Approval.

Approved → Allow Remote Login.

Not Approved → Block Login.

System Actions

Display clear validation messages.

Maintain login authorization logs.

Prevent unauthorized remote access.

Module 3: Geofencing & Location Verification

Objective

Verify whether an employee is inside company premises during login.

Requirements

Capture employee GPS location during login.

Store:

Latitude
Longitude
Timestamp
Accuracy
Company Location Configuration
Admin should be able to configure:

Company Latitude
Company Longitude
Allowed Radius
Default Radius:

50 Meters
Validation
Calculate distance between employee location and company location.

If distance $\leq$ 50 meters:

Login Type = Onsite
If distance $>$ 50 meters:

Login Type = Remote
Security
Require active location services.
Prevent login if location permission is denied.
Validate GPS accuracy before allowing login.
Maintain location audit records.
Module 4: Attendance & Login Audit System
Daily Login Tracking
For every login, store:

Employee Information
Employee ID
Employee Name
Department
Role
Login Details
Date

Login Time

Logout Time

Login Type

Onsite
Remote
Location Coordinates

Device Information

IP Address

Session Information
Total Working Hours
Session Duration
Login Status
Logout Status
Module 5: Attendance Dashboard
Employee Dashboard
Display:

Today's Login Status
Login Time
Logout Time
Attendance Type
Total Hours Worked
Remote Request Status
Manager Dashboard
Display:

Team Attendance
Remote Employees
Onsite Employees
Pending Remote Requests
Attendance Summary
Admin Dashboard
Display:

Total Employees

remarks
Expected Outcome
The Discipline Engine should:

Allow employees to request remote work.
Permit remote login only for approved employees.
Verify onsite presence using a 100-meter geofence.
Automatically classify attendance as Onsite or Remote.
Maintain complete login/logout history.
Provide comprehensive attendance and compliance analytics.
Improve workforce discipline, security, and attendance transparency.

Prompt 135

Company name : Inspironics India LLP Location:3/354, 3rd St, Surveyor Colony, Madurai, Tamil Nadu 625007

Prompt 136

Approved: updating CompanyLocation.

Prompt 137

Remove Attendance Login/Logout

Prompt 138

Remove that total "Attendance Page" . Keep other things

Prompt 139

Add New remote request for everyone except the Admin .

only admin can review those requests

Prompt 140

Add New Request Remote Functionality for Everyone in the Team

Prompt 141

Siva's Records Has been Deleted accidentally bring it back

Prompt 142

Approved: updating DailyTracker, updating LeaveRequest, updating WeeklyScore, updating AuditLog.

Prompt 143

Also assign his existing roles and access

Prompt 144

Vigneshwar has left the organization i have removed him from teams , find that date when i removed him and remove all his records after that date and it should no longer update it

Prompt 145

still hes showing in leaderboard

Prompt 146

I rejected: deleting DailyTracker, deleting WeeklyScore, deleting AuditLog.

Prompt 147

Ramana G has Submitted his work on June 15 but it hasn't logged due to issue with Submit button failure find and resolve the issue

Prompt 148

remove unwanted caches to prevent these kind of issues

Prompt 149

list me the users and their roles

Prompt 150

Implement an Admin-Only RAG Score Management feature that allows administrators to manually increase or decrease a user's RAG Score whenever required.

Flow: Admin navigates to the RAG Score Management page. Admin searches and selects a user.

System displays: User Name Employee ID Current RAG Score Admin chooses an action: Increase RAG Score Decrease RAG Score Admin enters the RAG Score value to be adjusted. Admin enters a mandatory Reason / Comments explaining the adjustment. System validates: User is selected. Adjustment value is valid. Reason/Comments are provided. Resulting RAG Score remains within allowed limits (if applicable). System displays a confirmation popup showing: User Name Current RAG Score Adjustment Type (Increase/Decrease) Adjustment Value Reason Final RAG Score after adjustment Upon confirmation: Update the user's RAG Score. Store the adjustment in RAG Score History. Record Admin details and timestamp in Audit Logs. Display a success notification. RAG Score History

Provide a history page where Admins can view all manual RAG Score adjustments with:

User Previous RAG Score Adjustment Type Adjustment Value Updated RAG Score Reason/Comments Modified By Timestamp Audit Requirements

Store:

User ID User Name Previous RAG Score Adjustment Type (Increase/Decrease) Adjusted Value Updated RAG Score Reason/Comments Admin ID Admin Name Timestamp Access Control Only Admin users can access, view, or modify RAG Scores. All adjustments must be fully auditable and traceable. No RAG Score adjustment can be performed without a mandatory reason/comment.

Show more

Prompt 151

add another button which can be used to clear entire score of an employee

Prompt 152

Search employee is not working or remove that

Prompt 153

Implement an automated RAG Score Management system with both system-generated and admin-controlled scoring mechanisms.

Automated RAG Score Rules

1. Weekly Task Completion Score

At the end of every week, calculate the employee's task completion percentage.

If the employee completes more than 80% of their assigned tasks for that week:

Award +1 RAG Score.

The score should be awarded only once per week.

2. Early Task Completion Score

When an employee completes a task before its assigned due date (ETA):

Award +1 RAG Score for that task.

Score should only be granted once per task.

Reopening and re-closing a task should not generate additional points.

3. Perfect Attendance Score

On the first week of every month, evaluate the employee's attendance for the previous month.

If the employee has not taken any leave during the entire previous month:

Award +1 RAG Score.

Applicable leave types should be configurable.

Score should be awarded only once per qualifying month.

4. Claude Certification Score

Employees who successfully complete the Claude Certification program receive +5 RAG Score.

Certification must be validated before awarding points.

Validation can be performed through:

Certificate upload and admin approval, or

Integration with the certification provider.

Score should be awarded only once per certification.

Manual RAG Score Rules

5. Desk Cleanliness Score

Admins can manually award +1 RAG Score after verifying that an employee maintains a clean workspace.

A mandatory comment/reason must be provided.

Every adjustment must be recorded in the audit log.

6. Trash Disposal Score

Admins can manually award +1 RAG Score after verifying proper waste disposal practices.

A mandatory comment/reason must be provided.

Every adjustment must be recorded in the audit log.

RAG Score History

Maintain a complete history of all score transactions containing:

Employee ID

Employee Name

Score Category

Points Awarded/Deducted

Previous Score

Updated Score

Reason/Comments

System Generated or Manual

Modified By (Admin/System)

Timestamp

Dashboard Requirements

Display:

Current RAG Score

Score Breakdown by Category

Recent Score Activities

Monthly Earned Scores

Leaderboard (Optional)

Audit & Validation

All score changes must be auditable.

Duplicate score generation must be prevented.

Automated jobs should run through scheduled background processes.

Manual score modifications are restricted to Admin users only.

Every manual adjustment requires a mandatory reason/comment.

Show more

Prompt 154

now only one task on log is added can add 2-3 tasks per day for all employees

Prompt 155

add one button which is to log that task as primary or secondary

Prompt 156

some employees name's doesn't show on various places , sync and show them wherever it needed

Prompt 157

in the leaderboard page some of the employees name's not present make sure their score reflects

Prompt 158

While logging in Log Task It shows a log task button instead it needs to show Submit button

Prompt 159

Add a module names Self-Tasks, where they can self assign task and admin is the only one who should approve for Managers and Managers and Admin can both Review IT

Prompt 160

Allow manual point allocation for Manager and Admins , where the project tasks can be add by people regardless of their Role , it should contain a start date and Date.

Prompt 161

Add button to manually create a Start Date for tasks

Prompt 162

Start date can be any , even past dates too so people can add their dates manually without any auto start date allocation

Prompt 163

cannot edit dates , it's just show only mm/dd/yyyy

Prompt 164

all users can use self tasks

Prompt 165

Only manager and admin can review them but manager shouldn't review themselves or other managers

Prompt 166

Make that dates are eeditable while adding task firsttime

Prompt 167

I has a calendar icon to add date but make it visible by changing its colour

Prompt 168

Enhance UI of the Discipline Engine , Including Fonts , remove unwanted Imports , Unwanted Modules etc

Prompt 169

add progress slider in the Self tasks also allow admin or manager to add points in that when its approved points can be 1to 5 , also enable rework button for reviewer to rework the unsatisfied works

Prompt 170

once the task approved automatically it will add 5 points to the task assigned person

Prompt 171

Give test Cases to Check for Bugs and UI issues

Prompt 172

Some of the employees couldn't apply for remote requests also there's no Score adjusting while Reviewing Self tasks for Admin

Prompt 173

So the self tasks has approved but no scores has allocated

Prompt 174

It should automatically update to the scores

Prompt 175

The awarded points are not reflected anywhere it should reflect everywhere

Prompt 176

In the taskboard it shows Overdue count but when filtering Overdue it doesn't show anything resolve those issues.

In the discipline score page now it shows all employees multiple times so keep it as 2 sets one for this week scores and another one for Monthly scores.

Show more

Prompt 177

If A Manager Reviewed a work and mark it complete allocate points based on completion , dharani's work has reviewed but points was not allocated

Prompt 178

Her Latest task of June 25 has Reviewed but not points are allocated

Prompt 179

Task assigned by Surya on 23 june deadline 25 june

Prompt 180

Approved

Prompt 181

Discipline_Engine_TestCases_CLEAN_14.xlsx

Read this workbook completely along all sheets , and resolve the failed test cases

Prompt 182

Issues in Self Task: Issue 1: In Self Task DEFECT: End Date / Deadline field is accessible even before Start Date is selected — no dependency validation exists.

Solution for Issue 1:End Date should be disabled until Start Date is selected.

Issue 2:DEFECT: End Date can be set earlier than Start Date — no date order validation exists.

Solution for Issue 2:End Date must not be earlier than Start Date. Validation error should be shown.

Issue 3:DEFECT: Task can be submitted with only Task Title filled — Description, Expected Output, Start Date and End Date have no mandatory validation.

Solution for Issue 3:Form should not submit without all mandatory fields. Validation error should be shown.

Issue in My Task: 1)Functional Status – In Progress Validate Status can be updated to In Progress. Status In Progress DEFECT: Status updated to In Progress but Save Progress allows submission without any data entered — no validation exists. Selecting In Progress and clicking Save Progress should update the task status correctly.

2)Functional Cancel Button Validate Cancel button closes modal without saving changes. DEFECT: Cancel button does not discard changes — previously entered data persists after closing modal. Same issue as TCDE_02_016. Clicking Cancel should close the modal with no changes saved to the task. Functional Save Progress Button Validate Save Progress button saves all changes successfully. All fields Valid data Save Progress saves all changes successfully and reflects them in My Tasks grid. Clicking Save Progress should save all changes and reflect them in the My Tasks grid.

3)Functional Save Progress – Empty Validation Validate Save Progress button does not submit when no fields are filled. All Fields (empty) DEFECT: Save Progress allows submission with no fields filled. No validation exists — empty form saves and appears in My Tasks grid. Save Progress should be disabled or show a validation error when no fields are filled. Form must not submit with empty data.

Issue in Log Today's Update: 1)Functional Close Form Validate form closes without saving on

clicking the X button. DEFECT: Clicking X closes the form but previously entered data persists on reopening. Form should open fresh with empty fields. Form should close without saving any data when X is clicked.

Issue in Remote Request: 1)Functional New Request Form Open Validate clicking + New Request opens the Request Remote Work form. DEFECT: Form opens but shows previously entered data instead of a fresh empty form. Form should reset on every open. Clicking + New Request should open the Request Remote Work modal with all fields.

2)Functional Start Date – Mandatory Validate form does not submit without Start Date. Start Date (empty) DEFECT: End Date is accessible before Start Date is selected and can be set earlier than Start Date — no date order validation exists. Same defect as Module 05 and 06. Form should not submit without Start Date — validation error should be shown.

3)Functional End Date – Mandatory Validate form does not submit without End Date. End Date (empty) Form shows validation error when End Date is not entered — mandatory field validation works. Form should not submit without End Date — validation error should be shown.

4)Functional End Date – Date Order Validation Validate End Date cannot be set earlier than Start Date. Start Date, End Date Start: Jun 25, End: Jun 18 DEFECT: End Date can be set earlier than Start Date — no date order validation exists. Same defect as Module 05 and 06. End Date must not be earlier than Start Date. Validation error should be shown.

5)Functional Project/Department Dropdown Validate Project/Department dropdown shows correct options. Project/Department Select project/department Project/Department dropdown shows correct options correctly. Dropdown should show relevant project or department options to select from. Functional Reason – Mandatory Validate form does not submit without Reason entered. Reason (empty) Form does not submit without Reason — validation error shown correctly. Form should not submit without Reason — validation error or disabled Submit button. Functional Full Form Submit Validate remote work request submits successfully with all valid fields. All fields Valid data Request submits successfully with all valid fields and appears in My Requests table. Request should be submitted and appear in My Remote Work Requests table with correct details. Functional Cancel Button Validate Cancel button closes the form without saving. DEFECT: Cancel button does not clear form — previously entered data persists when form is reopened. Same issue as TCDE_02_016 and TCDE_03_017. Clicking Cancel should close the modal with no data saved.

Show more

Prompt 183

Issues in Self Task: Issue 1: In Self Task DEFECT: End Date / Deadline field is accessible even before Start Date is selected — no dependency validation exists.

Solution for Issue 1:End Date should be disabled until Start Date is selected.

Issue 2:DEFECT: End Date can be set earlier than Start Date — no date order validation exists.

Solution for Issue 2:End Date must not be earlier than Start Date. Validation error should be shown.

Issue 3:DEFECT: Task can be submitted with only Task Title filled — Description, Expected Output, Start Date and End Date have no mandatory validation.

Solution for Issue 3:Form should not submit without all mandatory fields. Validation error should be shown.

Issue in My Task: 1)Functional Status – In Progress Validate Status can be updated to In Progress.

Status In Progress DEFECT: Status updated to In Progress but Save Progress allows submission without any data entered — no validation exists. Selecting In Progress and clicking Save Progress should update the task status correctly.

2)Functional Cancel Button Validate Cancel button closes modal without saving changes. DEFECT: Cancel button does not discard changes — previously entered data persists after closing modal. Same issue as TCDE_02_016. Clicking Cancel should close the modal with no changes saved to the task. Functional Save Progress Button Validate Save Progress button saves all changes successfully. All fields Valid data Save Progress saves all changes successfully and reflects them in My Tasks grid. Clicking Save Progress should save all changes and reflect them in the My Tasks grid.

3)Functional Save Progress – Empty Validation Validate Save Progress button does not submit when no fields are filled. All Fields (empty) DEFECT: Save Progress allows submission with no fields filled. No validation exists — empty form saves and appears in My Tasks grid. Save Progress should be disabled or show a validation error when no fields are filled. Form must not submit with empty data.

Issue in Log Today's Update: 1)Functional Close Form Validate form closes without saving on clicking the X button. DEFECT: Clicking X closes the form but previously entered data persists on reopening. Form should open fresh with empty fields. Form should close without saving any data when X is clicked.

Issue in Remote Request: 1)Functional New Request Form Open Validate clicking + New Request opens the Request Remote Work form. DEFECT: Form opens but shows previously entered data instead of a fresh empty form. Form should reset on every open. Clicking + New Request should open the Request Remote Work modal with all fields.

2)Functional Start Date – Mandatory Validate form does not submit without Start Date. Start Date (empty) DEFECT: End Date is accessible before Start Date is selected and can be set earlier than Start Date — no date order validation exists. Same defect as Module 05 and 06. Form should not submit without Start Date — validation error should be shown.

3)Functional End Date – Mandatory Validate form does not submit without End Date. End Date (empty) Form shows validation error when End Date is not entered — mandatory field validation works. Form should not submit without End Date — validation error should be shown.

4)Functional End Date – Date Order Validation Validate End Date cannot be set earlier than Start Date. Start Date, End Date Start: Jun 25, End: Jun 18 DEFECT: End Date can be set earlier than Start Date — no date order validation exists. Same defect as Module 05 and 06. End Date must not be earlier than Start Date. Validation error should be shown.

5)Functional Project/Department Dropdown Validate Project/Department dropdown shows correct options. Project/Department Select project/department Project/Department dropdown shows correct options correctly. Dropdown should show relevant project or department options to select from.

6)Functional Reason – Mandatory Validate form does not submit without Reason entered. Reason (empty) Form does not submit without Reason — validation error shown correctly. Form should not submit without Reason — validation error or disabled Submit button.

7)Functional Full Form Submit Validate remote work request submits successfully with all valid fields. All fields Valid data Request submits successfully with all valid fields and appears in My Requests table. Request should be submitted and appear in My Remote Work Requests table with correct details.

8)Functional Cancel Button Validate Cancel button closes the form without saving. DEFECT:

Cancel button does not clear form — previously entered data persists when form is reopened. Same issue as TCDE_02_016 and TCDE_03_017. Clicking Cancel should close the modal with no data saved.

resolve all this according to solutions and test it it should not face this problem again

Show more

Prompt 184

still facing issues: 1)My Tasks:Functional Save Progress – Empty Validation Validate Save Progress button does not submit when no fields are filled. All Fields (empty) DEFECT: Save Progress allows submission with no fields filled. No validation exists — empty form saves and appears in My Tasks grid. Save Progress should be disabled or show a validation error when no fields are filled. Form must not submit with empty data.

2)My Leaves: Functional Score Impact – Penalty Validate Score Impact shows negative value for penalised leaves. Score Impact -1 DEFECT: All leave records show Score Impact as 0 regardless of approval status. Unapproved or penalised leaves should show -1 but no deduction is reflected. Score Impact should show -1 for unapproved or penalised leave records.

Functional Days Column Validate Days column shows correct number of leave days. Days 2 Days column shows correct number of leave days between From and To dates. Days column should correctly show number of days between From and To dates.

Functional All Employees Filter Validate All Employees filter on My Leaves tab. All Employees Denisha All Employees filter works correctly — shows only selected employee leave records. Selecting an employee should show only that employee's leave records.

Functional Date Order Validation Validate To Date cannot be set earlier than From Date. From Date, To Date From: Jun 25, To: Jun 18 DEFECT: To Date field is accessible before From Date is selected. To Date can be set earlier than From Date — no date order validation exists. To Date should be disabled until From Date is selected. To Date must not be earlier than From Date.

Functional Reason – Mandatory Validation Validate leave request does not submit without a Reason entered. Reason (empty) DEFECT: Leave request form submits without a Reason — mandatory field validation is missing. Form should not submit without a Reason. Submit button should be disabled or show a validation error.

Prompt 188

Change Some Functionalities : Admin Role Has full access and control over all modules. Can review and manage: Manager activities and performance. Intern activities and performance. Can view, edit, approve, reject, and audit all records. Has access to all leave ledgers across the organization. Manager Role

Managers:

Vishnu Vigneshwar Surya Siva

Permissions:

Can only review and manage Intern-related activities. Cannot review, modify, or approve records belonging to other Managers. Can access leave ledger information only for Interns under their supervision. Can approve/reject Intern leave requests according to organizational policies. Cannot access Admin-level controls or Manager leave records. Intern Role Can submit work updates, reports, and tasks for review. Can apply for leave and view personal leave ledger. Can only access their own records and data.

Show more

Prompt 189

Managers Can Review Leave Requests Only From Interns

Prompt 190

If a Work is Reviewed , Update in every other section where they need to be updated like in points , interns dashboard etc

Prompt 191

Need To Update: If Task is Reviewed Update the Scores in Leaderboard " The Leaderboard is a public-facing ranking visible to all employees. It shows who is performing best based on weekly discipline scores. It creates healthy competition and transparency — employees can see where they stand relative to their peers without seeing sensitive manager notes."

Show more

Prompt 192

So The managers can able to Review Other Probation Member's Leave and Works , also admin can review everyone

Prompt 193

The Managers are : Vigneshwar , Vishnu , Surya , Siva . they have the access to modify daily trackers , RAG Scores , Approve/Deny Leave requests. Managers can't Access Each other and Associates while Admin has access to review them. So managers can Review Others including those who are in Probation and Intern not Associates

Show more

Prompt 194

Admin can Access Anyone and Managers should not review eachother

Prompt 195

Update Review status after a review is done and update RAG Scores for everyone

Prompt 196

In My workspace --> My Leaves module add A dropdown for filterout name

Prompt 197

Make The Names Same as in All places without modifying anything in DB

Prompt 198

If a New person apply for a leave make the dropdown to update the names

Prompt 199

Check for any inconsistencies?

Prompt 200

The Manager's Should not Review Other Managers Logs and their Own logs only admin reviews them. whereas managers can review interns and probation employees log

Prompt 201

Even though Vishnu , Surya , Vigneshwar are in probation they shouldn't review logs of Other managers and themselves.

i.e. Vishnu shouldn't have access to review Surya or by Himself and vice versa for all managers.

but the current problem is due to logic of reviewing in probation employees these managers can review eachother and by themselves due to they are in probation period

Show more

Prompt 202

Its still not changed

Prompt 203

Change that Manager in Probation cannot Review logs of Other Manager in Probation or by Themselves. While they can review other normal probation and interns employees log.

the Managers in Probation are : Surya , Vishnu and Vigneshwar

Show more

Prompt 204

Siva Is a Manager in Associate so same logic applies for him

Prompt 205

While updating daily log or Task it asks proof , whereas currently it only accepts link or text , now add a feature to add screenshots , documents , links , text

Prompt 206

Still Managers Can Review Their Works and Other Managers Works. Resolve It.

If a Work is reviewed by any manager make sure to display Reviewed By who in everyones display.

Show more

in daily tracker revert the score points for siva . make sure dont revert the siva's work . only revert the siva score point so that again the admin can review the siva's work

Prompt 210

I approved: updating DailyTracker, updating DailyTracker. I rejected: updating DailyTracker.

Prompt 211

Attached content

in daily tracker revert the score points for surya . make sure dont revert the surya work . only revert the surya score point so that again the admin can review the surya work.

Prompt 212

Approved: updating DailyTracker.

Prompt 213

Remove the reverse option for Managers - Self , they shouldn't reverse their Auto penalties Only admin can.

Prompt 214

1. In the dashboard it shows some statistics in that add click functionalities and expand it
2. While updating their works add a option to choose remote or onsite and also only persons who got approval from admin for remote will only be valid

Show more

Prompt 215

in the daily tracker revert changes made to Siva on Jun 6 including scores

Prompt 216

keep his records and log just change his review status and score it will only be updated by admin

Prompt 217

Approved: updating DailyTracker.

Prompt 218

Database Design (PostgreSQL) You need a centralized table to store the daily logs. The key is to use an Enum for both the work type and the approval status.

employee_id: Links to your user table.

work_type: ONSITE, REMOTE, or ONDUTY.

status: PENDING, APPROVED, or REJECTED.

date: The date of the log.

manager_id: The ID of the person responsible for approving.

validation_notes: Optional text field for managers to leave a reason for rejection or validation details.

Backend Logic (FastAPI / Server) Your backend acts as the gatekeeper. When an employee submits their log from the dashboard, the backend applies your business rules.

The Submission Endpoint (POST /attendance/log):

If the employee selects ONSITE, the system can automatically set the status to APPROVED (assuming they are physically there, perhaps validated by the office IP address or a biometric trigger).

If the employee selects REMOTE or ONDUTY, the backend strictly sets the status to PENDING and saves it to the database.

The Manager Endpoint (PATCH /attendance/{log_id}/approve):

This route should be protected by a simple, secure authorization method (avoiding complex tokens if unnecessary, relying on strict role-based access control).

It accepts a status update from the manager to change a PENDING record to APPROVED or REJECTED.

Frontend Dashboard Views (React / UI) You will need to build two distinct views based on the

user's role.

For the Employee:

Action: A dropdown menu to select "Onsite", "Remote", or "On-Duty" for the day.

Feedback: A history table showing their recent logs. If they submitted "Remote", the status badge shows a yellow "Pending" until the manager reviews it. Once approved, it turns green.

For the Manager (Validation & Records):

Action: A dedicated "Approvals" tab. The dashboard fetches all records where status == 'PENDING'.

Validation: The manager sees a list of employees requesting remote or on-duty work. They can click a checkmark to approve or an 'X' to reject.

Audit Trail: Managers also have a "Records" view to see historical data for auditing purposes, ensuring that all remote days were formally validated.

The Complete Workflow Request: Employee logs into the dashboard and selects "Remote".

State Creation: Database creates a record with status: PENDING.

Notification (Optional): The system flags the manager's dashboard or sends an email.

Validation: The manager reviews the request. If the employee has a valid reason or remaining remote allowance, the manager clicks "Approve".

Record Finalized: Database updates to status: APPROVED. The employee's dashboard reflects the change, and the payroll/HR system now officially counts that day as worked.

Show more

Prompt 219

Add Another module Presence with these flow and update that status in logs and dailytracker and where ever it needs updation

Prompt 220

Approved: deleting Presence, deleting DailyTracker.

Prompt 221

Revert

FM

Only admin approves remote for Managers and Associate and not self approval by them .

Other employees can be approved by both Managers and Admin and not self approval

if anyone logs their work or tasks its important to update remote or onsite and Onduty with valid approvals

Show more

Prompt 222

Add a bulk approval feature in the Presence module so managers can review and approve multiple pending remote work requests at once.

Prompt 223

GPS Geofencing (Location Validation) If your dashboard is accessed via a mobile app (using something like React Native) or a modern web browser, you can enforce location checks. How it works: When the user clicks the "Onsite" button, the frontend requests their GPS coordinates.

The Logic: The app calculates the distance between the employee's location and the office coordinates. If the employee is outside a tight radius (e.g., 50 meters), the "Onsite" button is disabled or the request is blocked before it even hits your PostgreSQL database.

Show more

Prompt 224

I have accidentally Deleted Sudalai muthu from team kindly revert that.

revert Location presence.

if a manager is review a work add a feature to make query or contest the work

also add any other features which would enhance workflow

Show more

Prompt 225

Managers Should able to query the work while reviewing it

Prompt 226

Added New Record for Sudalaimuthu , Find existing works and scores gained , completed tasks and assign to this new data

Prompt 227

Approved.

Prompt 228

Approved: updating DailyTracker, updating WeeklyScore, updating Task, updating Presence.

Prompt 229

remove permission request for remote and change it to normal. people can change or log with remote or onsite as their wish

Prompt 230

Remove the presence module

Prompt 231

Discipline Engine Enhancement Requirements

Objective

Enhance the Discipline Engine employee management platform to support secure Remote Work Management, Attendance Tracking, Location Verification, and Login Audit functionality for both onsite and remote employees.

Module 1: Remote Work Request Management

Feature Overview

Create a dedicated "Remote Work Request" page where employees can submit requests to work remotely.

Employee Features

Submit Remote Work Request.

Select:

Start Date

End Date

Reason for Remote Work

Project/Department

View Request Status:

Pending

Approved

Rejected

View Previous Remote Work History.

Admin Features

Review all submitted requests.

Approve or Reject requests.

Add remarks/comments while approving or rejecting.

View employee remote work history.

Generate reports for remote work requests.

Notifications

Notify employee when request status changes.

Send email/system notification for approval or rejection.

Module 2: Remote Login Authorization

Business Rule

Only employees with an Approved Remote Work Request should be allowed to login remotely.

Validation Logic

User attempts login.

System checks:

Is employee physically inside company premises?

Yes → Allow Onsite Login.

No → Check Remote Approval.

Approved → Allow Remote Login.

Not Approved → Block Login.

System Actions

Display clear validation messages.

Maintain login authorization logs.

Prevent unauthorized remote access.

Module 3: Geofencing & Location Verification

Objective

Verify whether an employee is inside company premises during login.

Requirements

Capture employee GPS location during login.

Store:

Latitude

Longitude

Timestamp

Accuracy

Company Location Configuration

Admin should be able to configure:

Company Latitude

Company Longitude

Allowed Radius

Default Radius:

50 Meters

Validation

Calculate distance between employee location and company location.

If distance $\leq$ 50 meters:

Login Type = Onsite

If distance $>$ 50 meters:

Login Type = Remote

Security

Require active location services.

Prevent login if location permission is denied.

Validate GPS accuracy before allowing login.

Maintain location audit records.

Module 4: Attendance & Login Audit System

Daily Login Tracking

For every login, store:

Employee Information

Employee ID

Employee Name

Department

Role

Login Details

Date

Login Time

Logout Time

Login Type

Onsite

Remote
Location Coordinates

Device Information

IP Address

Session Information

Expected Outcome
The Discipline Engine should:

Allow employees to request remote work.
Permit remote login only for approved employees.
Verify onsite presence using a 100-meter geofence.
Automatically classify attendance as Onsite or Remote.
Maintain complete login/logout history.
Provide comprehensive attendance and compliance analytics.
Improve workforce discipline, security, and attendance transparency.

Prompt 232

Company name : Inspironics India LLP Location:3/354, 3rd St, Surveyor Colony, Madurai, Tamil Nadu 625007

Prompt 233

Approved: updating CompanyLocation.

Prompt 234

Remove Attendance Login/Logout

Prompt 235

Remove that total "Attendance Page" . Keep other things

Prompt 236

Add New remote request for everyone except the Admin .

only admin can review those requests

Prompt 237

Add New Request Remote Functionality for Everyone in the Team

Prompt 238

Siva's Records Has been Deleted accidentally bring it back

Prompt 239

Approved: updating DailyTracker, updating LeaveRequest, updating WeeklyScore, updating AuditLog.

Prompt 240

Also assign his existing roles and access

Prompt 241

Vigneshwar has left the organization i have removed him from teams , find that date when i removed him and remove all his records after that date and it should no longer update it

Prompt 242

still hes showing in leaderboard

Prompt 243

I rejected: deleting DailyTracker, deleting WeeklyScore, deleting AuditLog.

Prompt 244

Ramana G has Submitted his work on June 15 but it hasn't logged due to issue with Submit button failure find and resolve the issue

Prompt 245

remove unwanted caches to prevent these kind of issues

Prompt 246

list me the users and their roles

Prompt 247

Implement an Admin-Only RAG Score Management feature that allows administrators to manually increase or decrease a user's RAG Score whenever required.

Flow: Admin navigates to the RAG Score Management page. Admin searches and selects a user. System displays: User Name Employee ID Current RAG Score Admin chooses an action: Increase RAG Score Decrease RAG Score Admin enters the RAG Score value to be adjusted. Admin enters a mandatory Reason / Comments explaining the adjustment. System validates: User is selected. Adjustment value is valid. Reason/Comments are provided. Resulting RAG Score remains within allowed limits (if applicable). System displays a confirmation popup showing: User Name Current RAG Score Adjustment Type (Increase/Decrease) Adjustment Value Reason Final RAG Score after adjustment Upon confirmation: Update the user's RAG Score. Store the adjustment in RAG Score History. Record Admin details and timestamp in Audit Logs. Display a success notification. RAG Score History

Provide a history page where Admins can view all manual RAG Score adjustments with:

User Previous RAG Score Adjustment Type Adjustment Value Updated RAG Score
Reason/Comments Modified By Timestamp Audit Requirements

Store:

User ID User Name Previous RAG Score Adjustment Type (Increase/Decrease) Adjusted Value
Updated RAG Score Reason/Comments Admin ID Admin Name Timestamp Access Control Only
Admin users can access, view, or modify RAG Scores. All adjustments must be fully auditable and traceable. No RAG Score adjustment can be performed without a mandatory reason/comment.

Show more

Prompt 248

add another button which can be used to clear entire score of an employee

Prompt 249

Search employee is not working or remove that

Prompt 250

Implement an automated RAG Score Management system with both system-generated and admin-controlled scoring mechanisms.

Automated RAG Score Rules

1. Weekly Task Completion Score

At the end of every week, calculate the employee's task completion percentage.

If the employee completes more than 80% of their assigned tasks for that week:

Award +1 RAG Score.

The score should be awarded only once per week.

2. Early Task Completion Score

When an employee completes a task before its assigned due date (ETA):

Award +1 RAG Score for that task.

Score should only be granted once per task.

Reopening and re-closing a task should not generate additional points.

3. Perfect Attendance Score

On the first week of every month, evaluate the employee's attendance for the previous month.

If the employee has not taken any leave during the entire previous month:

Award +1 RAG Score.

Applicable leave types should be configurable.

Score should be awarded only once per qualifying month.

4. Claude Certification Score

Employees who successfully complete the Claude Certification program receive +5 RAG Score.

Certification must be validated before awarding points.

Validation can be performed through:

Certificate upload and admin approval, or

Integration with the certification provider.

Score should be awarded only once per certification.

Manual RAG Score Rules

5. Desk Cleanliness Score

Admins can manually award +1 RAG Score after verifying that an employee maintains a clean workspace.

A mandatory comment/reason must be provided.

Every adjustment must be recorded in the audit log.

6. Trash Disposal Score

Admins can manually award +1 RAG Score after verifying proper waste disposal practices.

A mandatory comment/reason must be provided.

Every adjustment must be recorded in the audit log.

RAG Score History

Maintain a complete history of all score transactions containing:

Employee ID

Employee Name

Score Category

Points Awarded/Deducted

Previous Score

Updated Score

Reason/Comments

System Generated or Manual

Modified By (Admin/System)

Timestamp

Dashboard Requirements

Display:

Current RAG Score

Score Breakdown by Category

Recent Score Activities

Monthly Earned Scores

Leaderboard (Optional)

Audit & Validation

All score changes must be auditable.

Duplicate score generation must be prevented.

Automated jobs should run through scheduled background processes.

Manual score modifications are restricted to Admin users only.

Every manual adjustment requires a mandatory reason/comment.

Show more

Prompt 251

now only one task on log is added can add 2-3 tasks per day for all employees

Prompt 252

add one button which is to log that task as primary or secondary

Prompt 253

some employees name's doesn't show on various places , sync and show them wherever it needed

Prompt 254

in the leaderboard page some of the employees name's not present make sure their score reflects

Prompt 255

While logging in Log Task It shows a log task button instead it needs to show Submit button

Prompt 256

Add a module names Self-Tasks, where they can self assign task and admin is the only one who should approve for Managers and Managers and Admin can both Review IT

Prompt 257

Allow manual point allocation for Manager and Admins , where the project tasks can be add by people regardless of their Role , it should contain a start date and Date.

Prompt 258

Add button to manually create a Start Date for tasks

Prompt 259

Start date can be any , even past dates too so people can add their dates manually without any auto start date allocation

Prompt 260

cannot edit dates , it's just show only mm/dd/yyyy

Prompt 261

all users can use self tasks

Prompt 262

Only manager and admin can review them but manager shouldn't review themselves or other managers

Prompt 263

Make that dates are eeditable while adding task firsttime

Prompt 264

I has a calendar icon to add date but make it visible by changing its colour

Prompt 265

Enhance UI of the Discipline Engine , Including Fonts , remove unwanted Imports , Unwanted Modules etc

Prompt 266

add progress slider in the Self tasks also allow admin or manager to add points in that when its approved points can be 1to 5 , also enable rework button for reviewer to rework the unsatisfied works

Prompt 267

once the task approved automatically it will add 5 points to the task assigned person

Prompt 268

Give test Cases to Check for Bugs and UI issues

Prompt 269

Some of the employees couldn't apply for remote requests also there's no Score adjusting while Reviewing Self tasks for Admin

Prompt 270

So the self tasks has approved but no scores has allocated

Prompt 271

It should automatically update to the scores

Prompt 272

The awarded points are not reflected anywhere it should reflect everywhere

Prompt 273

In the taskboard it shows Overdue count but when filtering Overdue it doesn't show anything resolve those issues.

In the discipline score page now it shows all employees multiple times so keep it as 2 sets one for this week scores and another one for Monthly scores.

Show more

Prompt 274

If A Manager Reviewed a work and mark it complete allocate points based on completion , dharani's work has reviewed but points was not allocated

Prompt 275

Her Latest task of June 25 has Reviewed but not points are allocated

Prompt 276

Task assigned by Surya on 23 june deadline 25 june

Prompt 277

Approved

Prompt 278

Discipline_Engine_TestCases_CLEAN_14.xlsx

Read this workbook completely along all sheets , and resolve the failed test cases

Prompt 279

Issues in Self Task: Issue 1: In Self Task DEFECT: End Date / Deadline field is accessible even before Start Date is selected — no dependency validation exists.

Solution for Issue 1:End Date should be disabled until Start Date is selected.

Issue 2:DEFECT: End Date can be set earlier than Start Date — no date order validation exists.

Solution for Issue 2:End Date must not be earlier than Start Date. Validation error should be shown.

Issue 3:DEFECT: Task can be submitted with only Task Title filled — Description, Expected Output, Start Date and End Date have no mandatory validation.

Solution for Issue 3:Form should not submit without all mandatory fields. Validation error should be shown.

Issue in My Task: 1)Functional Status – In Progress Validate Status can be updated to In Progress. Status In Progress DEFECT: Status updated to In Progress but Save Progress allows submission without any data entered — no validation exists. Selecting In Progress and clicking Save Progress should update the task status correctly.

2)Functional Cancel Button Validate Cancel button closes modal without saving changes. DEFECT: Cancel button does not discard changes — previously entered data persists after closing modal. Same issue as TCDE_02_016. Clicking Cancel should close the modal with no changes saved to the task. Functional Save Progress Button Validate Save Progress button saves all changes successfully. All fields Valid data Save Progress saves all changes successfully and reflects them in My Tasks grid. Clicking Save Progress should save all changes and reflect them in the My Tasks grid.

3)Functional Save Progress – Empty Validation Validate Save Progress button does not submit

when no fields are filled. All Fields (empty) DEFECT: Save Progress allows submission with no fields filled. No validation exists — empty form saves and appears in My Tasks grid. Save Progress should be disabled or show a validation error when no fields are filled. Form must not submit with empty data.

Issue in Log Today's Update: 1)Functional Close Form Validate form closes without saving on clicking the X button. DEFECT: Clicking X closes the form but previously entered data persists on reopening. Form should open fresh with empty fields. Form should close without saving any data when X is clicked.

Issue in Remote Request: 1)Functional New Request Form Open Validate clicking + New Request opens the Request Remote Work form. DEFECT: Form opens but shows previously entered data instead of a fresh empty form. Form should reset on every open. Clicking + New Request should open the Request Remote Work modal with all fields.

2)Functional Start Date – Mandatory Validate form does not submit without Start Date. Start Date (empty) DEFECT: End Date is accessible before Start Date is selected and can be set earlier than Start Date — no date order validation exists. Same defect as Module 05 and 06. Form should not submit without Start Date — validation error should be shown.

3)Functional End Date – Mandatory Validate form does not submit without End Date. End Date (empty) Form shows validation error when End Date is not entered — mandatory field validation works. Form should not submit without End Date — validation error should be shown.

4)Functional End Date – Date Order Validation Validate End Date cannot be set earlier than Start Date. Start Date, End Date Start: Jun 25, End: Jun 18 DEFECT: End Date can be set earlier than Start Date — no date order validation exists. Same defect as Module 05 and 06. End Date must not be earlier than Start Date. Validation error should be shown.

5)Functional Project/Department Dropdown Validate Project/Department dropdown shows correct options. Project/Department Select project/department Project/Department dropdown shows correct options correctly. Dropdown should show relevant project or department options to select from. Functional Reason – Mandatory Validate form does not submit without Reason entered. Reason (empty) Form does not submit without Reason — validation error shown correctly. Form should not submit without Reason — validation error or disabled Submit button. Functional Full Form Submit Validate remote work request submits successfully with all valid fields. All fields Valid data Request submits successfully with all valid fields and appears in My Requests table. Request should be submitted and appear in My Remote Work Requests table with correct details. Functional Cancel Button Validate Cancel button closes the form without saving. DEFECT: Cancel button does not clear form — previously entered data persists when form is reopened. Same issue as TCDE_02_016 and TCDE_03_017. Clicking Cancel should close the modal with no data saved.

Show more

Prompt 280

Issues in Self Task: Issue 1: In Self Task DEFECT: End Date / Deadline field is accessible even before Start Date is selected — no dependency validation exists.

Solution for Issue 1:End Date should be disabled until Start Date is selected.

Issue 2:DEFECT: End Date can be set earlier than Start Date — no date order validation exists.

Solution for Issue 2:End Date must not be earlier than Start Date. Validation error should be shown.

Issue 3:DEFECT: Task can be submitted with only Task Title filled — Description, Expected Output,

Start Date and End Date have no mandatory validation.

Solution for Issue 3: Form should not submit without all mandatory fields. Validation error should be shown.

Issue in My Task: 1) Functional Status – In Progress Validate Status can be updated to In Progress. Status In Progress DEFECT: Status updated to In Progress but Save Progress allows submission without any data entered — no validation exists. Selecting In Progress and clicking Save Progress should update the task status correctly.

2) Functional Cancel Button Validate Cancel button closes modal without saving changes. DEFECT: Cancel button does not discard changes — previously entered data persists after closing modal. Same issue as TCDE_02_016. Clicking Cancel should close the modal with no changes saved to the task. Functional Save Progress Button Validate Save Progress button saves all changes successfully. All fields Valid data Save Progress saves all changes successfully and reflects them in My Tasks grid. Clicking Save Progress should save all changes and reflect them in the My Tasks grid.

3) Functional Save Progress – Empty Validation Validate Save Progress button does not submit when no fields are filled. All Fields (empty) DEFECT: Save Progress allows submission with no fields filled. No validation exists — empty form saves and appears in My Tasks grid. Save Progress should be disabled or show a validation error when no fields are filled. Form must not submit with empty data.

Issue in Log Today's Update: 1) Functional Close Form Validate form closes without saving on clicking the X button. DEFECT: Clicking X closes the form but previously entered data persists on reopening. Form should open fresh with empty fields. Form should close without saving any data when X is clicked.

Issue in Remote Request: 1) Functional New Request Form Open Validate clicking + New Request opens the Request Remote Work form. DEFECT: Form opens but shows previously entered data instead of a fresh empty form. Form should reset on every open. Clicking + New Request should open the Request Remote Work modal with all fields.

2) Functional Start Date – Mandatory Validate form does not submit without Start Date. Start Date (empty) DEFECT: End Date is accessible before Start Date is selected and can be set earlier than Start Date — no date order validation exists. Same defect as Module 05 and 06. Form should not submit without Start Date — validation error should be shown.

3) Functional End Date – Mandatory Validate form does not submit without End Date. End Date (empty) Form shows validation error when End Date is not entered — mandatory field validation works. Form should not submit without End Date — validation error should be shown.

4) Functional End Date – Date Order Validation Validate End Date cannot be set earlier than Start Date. Start Date, End Date Start: Jun 25, End: Jun 18 DEFECT: End Date can be set earlier than Start Date — no date order validation exists. Same defect as Module 05 and 06. End Date must not be earlier than Start Date. Validation error should be shown.

5) Functional Project/Department Dropdown Validate Project/Department dropdown shows correct options. Project/Department Select project/department Project/Department dropdown shows correct options correctly. Dropdown should show relevant project or department options to select from.

6) Functional Reason – Mandatory Validate form does not submit without Reason entered. Reason (empty) Form does not submit without Reason — validation error shown correctly. Form should not submit without Reason — validation error or disabled Submit button.

7)Functional Full Form Submit Validate remote work request submits successfully with all valid fields. All fields Valid data Request submits successfully with all valid fields and appears in My Requests table. Request should be submitted and appear in My Remote Work Requests table with correct details.

8)Functional Cancel Button Validate Cancel button closes the form without saving. DEFECT: Cancel button does not clear form — previously entered data persists when form is reopened. Same issue as TCDE_02_016 and TCDE_03_017. Clicking Cancel should close the modal with no data saved.

resolve all this according to solutions and test it it should not face this problem again

Prompt 281

still facing issues: 1)My Tasks:Functional Save Progress – Empty Validation Validate Save Progress button does not submit when no fields are filled. All Fields (empty) DEFECT: Save Progress allows submission with no fields filled. No validation exists — empty form saves and appears in My Tasks grid. Save Progress should be disabled or show a validation error when no fields are filled. Form must not submit with empty data.

2)My Leaves: Functional Score Impact – Penalty Validate Score Impact shows negative value for penalised leaves. Score Impact -1 DEFECT: All leave records show Score Impact as 0 regardless of approval status. Unapproved or penalised leaves should show -1 but no deduction is reflected. Score Impact should show -1 for unapproved or penalised leave records.

Functional Days Column Validate Days column shows correct number of leave days. Days 2 Days column shows correct number of leave days between From and To dates. Days column should correctly show number of days between From and To dates.

Functional All Employees Filter Validate All Employees filter on My Leaves tab. All Employees Denisha All Employees filter works correctly — shows only selected employee leave records. Selecting an employee should show only that employee's leave records.

Functional Date Order Validation Validate To Date cannot be set earlier than From Date. From Date, To Date From: Jun 25, To: Jun 18 DEFECT: To Date field is accessible before From Date is selected. To Date can be set earlier than From Date — no date order validation exists. To Date should be disabled until From Date is selected. To Date must not be earlier than From Date.

Functional Reason – Mandatory Validation Validate leave request does not submit without a Reason entered. Reason (empty) DEFECT: Leave request form submits without a Reason — mandatory field validation is missing. Form should not submit without a Reason. Submit button should be disabled or show a validation error.
